INTRODUCTION

Dear Readers!

Offered to your attention "Directory..." represents the second, added, expanded and specified edition of the directory made and published by us in 1998. Its basic and main difference from the previous edition may be considered a significant expansion of the information given here both about separate persons, and about the whole regions.

In my opinion, it is necessary to tell some words about a technique of drawing up of the given edition and a method of optimum use of the information placed in it.

First, dispatch of questionnaires among experts - zoologists and collectors was carried out; this became a basis of the present directory. It is I think a pleasant debt to express here my deep gratitude to the editorial office of magazine "Ruthenica" for the handed questionnaires of experts - zoologists and collectors. In spite of the fact that at a whole these questionnaires have hopelessly become outdated (the majority of them is dated by 1991), some part of the basic information specified in them, after the appropriate check, was used in drawing up of our directory. However, it is necessary to note, that the data received from the questionnaires make approximately a half of the given ones in the present edition. The most active in this case appeared to be our colleagues from Ukraine, for what, taking an opportunity, I am sincerely grateful to them. My special thanks personally to Dr. Vitaly Anistratenko (Kiev) and Dr. Ruslana Melnychenko (Zhytomyr), without their active support the present edition would be much poorer, if in general would.

Second, the data from the scientific periodical press were widely used with the purpose of establishment of a real circle of persons, engaged by molluscs, their recent places of work, professional interests and subjects of the works published by them. In the third, due to the development of the electronic mass media, the data from Russian (mainly) Internet sectors were used. It has allowed to give references on really working (by the beginning of 2004) resources of a network concerning the organizations and persons engaged in molluscs research. At the same time we have purposely reduced the quantity (amount) of electronic addresses in the personal data, having left only those of them which were functioning for the period of January - February 2004 (or, at least, those who didn't answer, at the moment of our reference to them, with notices like a "User unknown"). Thus we, certainly, can't guarantee, that the similar message will not be received by you a bit later after the publication of the "Directory...". Unfortunately, the given way of communication only starts throughout open spaces of the CIS, and not everyone has a constant access to it, that partly explains any and often change of electronic addresses by users. Therefore we recommend to use the official post address for the first communication with the expert which is of interest to you, and the method of sending preferable to the majority of the Russian regions is "registered mail". Otherwise, your correspondence might not come into the hands of the addressee. In case you could not contact the colleague, having used all the ways specified here, try to contact an administration of institute or museum where the given expert works. Thus you can receive the most up-to date information on a staying of the person of interest to you. Besides you always may contact me on the e-mail address, specified here, and I shall try to contact the person of interest to you and to inform him about your in him interest.

Besides the ways set above, other open sources for reception and specification of the applied here information were widely used. The directory contains information on 403 persons working with molluscs in the period from 1998 till the end of 2003. The information on the persons died in the specified period is present as well. The part of the persons included earlier in the first edition "Directory" subsequently was removed for various reasons (impossibility of connection, absence of the address, change of objects of a research/collecting, the personal request, etc.).

The structure of the directory contains the following basic sections. The General part includes the basic available information on each mentioned person. The Geographical Index includes lists of names, located in a place of their basic residence or work at the moment of drawing up of the directory. The Taxonomical Index in which the mentioned persons are located in alphabetic order inside the groups of the basic objects of research.

We hope, that the present edition will help you to find the colleagues living and working in territory of the former USSR. Except for names, addresses and places of work, you will find here other additional information concerning professional interests, publications, objects of studying or a collecting and other.

ACKNOWLEDGEMENTS
